PYTHON

From Simple to Complex
With
Examples

AYESHA NOREEN

Bachelor's in Software Engineering,

Master's in Computer Science

from COMSATS University, Islamabad

NOTE!!!

In these notes Screenshots of practice examples and coding are added. The code files are also available in code folder that contain .ipynb files that are created on Jupyter notebook.

Chapter20
File Handling in Python

File handling deals with files in which tells us about how to read data from files and how to write data on files.

Read File

We can read file only when there is some data on the file. For reading file first we have to open file by giving it proper path than we can read whole text or can read line by line.we can also find out the position of cursor initially cursor position is 0 than its position after reading whole file is nth character of file.we use open()method for opening of file.

f=open('abc.txt', 'r')   OR   f=open('abc.txt')

Because by default it reads the file.
